PROFESSIONAL SUMMARY

Full Stack Developer with hands-on experience building responsive web applications using React, Next.js, TypeScript, and the MERN stack. Built full-stack applications end to end, including AI-driven features, secure authentication, and payment integration. Solid foundation in RESTful API design, relational and NoSQL databases, and modern development tooling.

EDUCATION

Bachelor of Science in Computer Science 2021 - 2025
International Islamic University Islamabad *Islamabad, Pakistan*

PROJECTS

CodeCanvas | Next.js, TypeScript, Convex, Gemini API, Tailwind CSS

- Built an AI-powered web app builder inspired by Bolt.new that generates project files and structure from natural language prompts, with a live in-browser code editor and preview.
- Implemented a real-time AI chat interface for iterative code generation and a workspace system supporting multiple projects per user.
- Implemented a token-based usage model with tiered pricing and integrated payment processing for subscriptions.

TestPilot | Next.js, TypeScript, Browserbase, GitHub API, Drizzle ORM

- Built an AI agent that connects to a user's GitHub repository, analyzes the codebase, and automatically generates relevant test cases.
- Implemented automated end-to-end test script generation and execution in a cloud-hosted browser environment through Browserbase integration.
- Designed configurable repository and test settings, allowing users to customize test coverage and rerun test suites on demand.

TaskForge | React.js, Node.js, PostgreSQL, Prisma, Clerk

- Built a full-stack project management platform enabling teams to organize projects, assign tasks, and track progress across shared workspaces.
- Implemented secure authentication and role-based team workspaces using Clerk, with automated email notifications powered by Inngest and Nodemailer.
- Designed relational data models with Prisma ORM and PostgreSQL to support multi-team collaboration and real-time progress tracking.

NeuroDiary | React.js, Node.js, MongoDB, Groq AI, Stripe API

- Built an AI-powered journaling application that analyzes user entries for mood and sentiment using natural language processing.
- Integrated Groq AI to generate real-time sentiment insights and implemented JWT-based authentication for secure user sessions.
- Added Stripe payment integration to support premium subscription features within the application.

WORK EXPERIENCE

Self-Directed Projects Jan 2026 – Present

- Building full-stack projects to deepen my skills in Next.js, TypeScript and AI-powered application development, including CodeCanvas and TestPilot (see Projects).
- Integrating third-party services such as the Gemini API, GitHub API, Browserbase, Convex and Stripe into end-to-end applications.
- Practicing the full build cycle on each project: architecture planning, data modeling, frontend and backend implementation, and deployment.

Frontend Web Developer (Internship) Aug 2024 - Oct 2024
InMixio *Gujranwala, Pakistan*

- Developed responsive user interfaces using React.js and Tailwind CSS, converting design mockups into reusable, pixel-accurate components.
- Built and maintained reusable UI components integrated with REST APIs, reducing duplicate code across multiple product screens.
- Collaborated with a cross-functional development team in an agile workflow, delivering assigned frontend features on schedule each sprint.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML5, CSS3
Frontend & Backend: React.js, Next.js, Tailwind CSS, Node.js, Express.js
Databases & ORMs: MongoDB, PostgreSQL, Prisma, Drizzle ORM, Convex
Authentication & Payments: Clerk, JWT, Stripe
Developer Tools: Git, GitHub, Postman, Vercel, Cursor, Antigravity
